STOPLOG STORAGE RACKS

In many situations the client will require the Stoplogs removing from the working chamber and temporarily storing in a suitable location. Either onto a wall face to reduce space or locally to working chamber directly onto the floor via mechanical fixing bolts.

Many applications dictate the need for multi-lane storage racks. Not just for storing the Stoplog, but also the need for storage of the Semi-Automatic lifting beam provided.

Generally all Stoplog storage racks regardless of type selection are supplied in Hot Dip Galvanised Mild Steel.

However optional material available can be either 304SS or 316SS.

STOPLOG STORAGE RACK

Stoplog Storage Racks

Construction Materials		
Item	Description	Materials
1	Rack	GMS, PMS, 304SS, 316SS
